EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Tyus on 12/22/04.

The application has been amended as follows:

Claim 1 has been changed to:

-- A process for producing alkyl aromatic compounds which comprises contacting benzene with at least one of polyisopropylbenzene or polyethylbenzene under transalkylation reaction conditions and in the presence of a transalkylation catalyst to provide an alkylated aromatic product possessing at least one alkyl group derived from said polyisopropylbenzene or polyethylbenzene, said transalkylation catalyst comprising a synthetic porous crystalline material of MCM-22 and free of binder materials. --.

Claim 11 has been changed to:

-- A process for producing alkyl aromatic compounds which comprises contacting at least one aromatic compound with at least one transalkylating agent possessing at least one aliphatic group having from 1 to 5 carbon atoms under transalkylation reaction conditions and in the presence of a transalkylation catalyst to provide an alkylated aromatic product possessing at least one alkyl group derived from said transalkylating agent, said transalkylation catalyst free of

binder materials and prepared by mulling crystals of a synthetic crystalline material of MCM-22 with water. --.

Claims 12-14 and 16 have been canceled.

The following is an examiner's statement of reasons for allowance: the prior art of record does not or render obviousness a process of transalkylation of benzene with polyisopropylbenzene in the presence of a transalkylation catalyst containing MCM-22 and free of binder materials. The closest art Bennett (5,371,310) disclose using a catalyst containing MCM-22 and alumina as a binder for transalkylation of benzene (example 12). However, one having ordinary skill in the art who studies the specification of this application must recognize that which (using of a MCM-22 transalkylation catalyst free of binder) applicants find is an unexpected result.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thuan D. Dang whose telephone number is 571-272-1445. The examiner can normally be reached on Mon-Thu.
